DETAILED ACTION

Response to Amendment/Arguments

1. Applicant's amendment and arguments filed on 08/08/2006 have been fully considered and they are found persuasive.
2. The rejection of claims 40 remain rejected under 35 U.S.C. 102(a) as being anticipated by Yoshida et al., EP 0 126 397 (hereinafter "Yoshida") is withdrawn.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.

Art Unit: 1713

2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

5. Claims 1-23, 25 and 27-40 are rejected under 35 U.S.C.

103(a) as being unpatentable over Yoshida et al., EP 0 126 397

(hereinafter "Yoshida") in view of Goetz, WO 97/01610. Yoshida teaches naphthalene derivative acrylate. See Yoshida, pages 3-

4. Yoshida further teaches polymerizing the naphthalene derivative acrylate to prepare polymers with a host of properties. See Table 1. The present invention claims a PSA with a high refractive index of 1.58 or more comprising an aromatic monomer. Yoshida teaches a naphthalene derivative acrylate. The PSA requirement is inherent in the teachings of Yoshida; most acrylates are known to be PSA's. In addition, Goetz teaches pressure sensitive adhesives with a high refractive index. See Goetz, page 8, lines 11-24. In view of Goetz, one having an ordinary skill in the art would be motivated to modify Yoshida to obtain to required properties and additives. Such modification would be obvious because one would expect that the use of PSA's as taught by Yoshida would be

similarly useful and applicable to the adhesives taught in Goetz.
